

The Advantages from NRW

Non Revenue Water (NRW) is water that has been produced and is lost before it reaches the customer. Losses can be real losses (through leaks, sometimes also referred to as physical losses) or apparent losses (for example through theft or metering inaccuracies). High levels of NRW are detrimental to the financial viability of water utilities, as well to the quality of water itself. NRW is typically measured as the volume of water "lost" as a share of net water produced. However, it is sometimes also expressed as the volume of water lost per km of water distribution network per day. NRW has two main benefits, firstly, consumers can get a good supply and secondly, profit for country.

In NRW, a leakage detection program may be highly visible, encouraging people to think about water conservation. It is more advantage when the pipe system is in good condition. The consumer can get a good supply of the water consumption. The financial also can gain and will gain financially from can reduced a water production, including possibly the delay of costly capacity expansion?

The Loss of water is very serious important because it can make a water usage will be on low pressure in the water line pipe system and it can make a dissatisfaction of consumer. It will can be produce a complaining of the consumer. Moreover, on the other problem is, many consumer is used the water for their business and it can make interrupting of their business. What is the biggest problem is, many important machine will be damage and the profit of company will be reduced. When the loss of water is increase, the environment will be affected because the source of water is limited. Many

next paragraph

places of the water source ^{s comes from} is on the rain forest and ^{this will greatly affect} the developing can give the effect of the water source.

As a conclusion NRW will give ^{an effects to} a important effect ^{s, the} for the consumer, environment and financial gains from minimized waste water.

Your thesis statement should not be talking about two benefits. It should be: ~~NRW~~

Good management of NRW can lead to ^{reduced} ~~customers~~ cost of water production but bad management of NRW can lead to serious waste of water.
